# SPOTLIGHT

## Frustrated by poor flow?

As businesses shift to organising by value stream, optimising for flow of value has become the new imperative.

**Spotlight is a suite of three services designed to help you accelerate flow:**

### Flow Illuminator

Establishes consistent Flow and DORA metrics to measure the current flow of value through your system, identify bottlenecks and software quality issues

### Flow Essentials

A workshop that equips executives and teams with the knowledge and mindset to embrace flow principles

### Flow Consulting

Provides expert guidance on optimising flow and taking improvement actions in your business that covers people and team topologies

By shining a light on the bottlenecks in your system, you're in a position to iteratively remove inefficiency and waste, make better business decisions and develop new ways of thinking, being and working that unlock value across your entire portfolio of work.

# Accelerate flow with Spotlight's suite of three services

## FLOW ILLUMINATOR

### Establish baseline metrics

Our flagship product, Flow Illuminator, automatically collects Flow and DORA data and presents it in user-friendly dashboards.

The metrics allow you to visualise flow, the distribution of work types and code quality.

We will work with you on your data quality issues to get your teams to a solid baseline.

You'll see the bottlenecks and dependencies that are really holding you back in your value delivery process.

Illuminator integrates seamlessly with your existing work management tools.

## FLOW ESSENTIALS

### Learn the principles of flow

Flow Essentials is a one-day interactive workshop for leaders and teams that delivers a deeper dive into Flow and DORA metrics.

Your teams will learn how to measure the value delivered to customers and identify the bottlenecks preventing faster flow.

You'll discover how to better prioritise resources across different types of work.

It will help embed flow principles into thinking, behaviours and actions and show you real-life examples of how they lead to better decision-making.

You'll leave with the confidence to adopt flow practices in your business.

Learn why you should care about managing the flow and quality of your software.

## FLOW CONSULTING

### Organise for optimal flow

Flow Consulting provides you with expert guidance in optimising flow in your context. We can work with you to:

- Align leaders and teams around value streams and building a Value Stream Management practice
- Address the human and operational aspects of flow optimisation (team topology)
- Create a roadmap for fully implementing metrics including designing a proof of concept to show value
- Take actions to resolve systemic issues
- Scale flow practices across teams

Flow Consulting is tailored to your needs.

# How it works

## Let's talk

- We pinpoint your flow optimisation aspirations and the outcomes you want
- We create a proposal detailing how each (or any) of our three Spotlight services answers your requirements
- Ballpark pricing and timing as follows...

## Flow Illuminator

- **\$25k (AU\$)** For up to three teams (plus a fixed fee for setup and tool integration)
- **\$3-5k (AU\$)** For each extra team depending on data quality and technical environment
- Engagement is approximately 2-4 weeks

## Flow Essentials

- **\$5-10k (AU\$)** One-day workshop for between 20 and 100 people
- We can organise venue, catering if required. Or we can hold it at your place

## Flow Consulting

- A bespoke service based on the size and complexity of your value stream

To understand broader system level constraints, see our [Floodlight Service](#).

These Spotlight Services focus on detail measurement and acceleration of *flow through your system*.

We have a more detailed guide on [Spotlight Services](#) here.
